

MINOS PCB Review

Custom Printed Circuit Boards designed for MINOS detector will be reviewed for quality control, quality assurance, and safety issues. This review will not cover any performance or integration issues.

The review will go over general safety and "good engineering practice" in mechanical, electrical, power, and documentation aspects. Review will be held at Fermilab with the following items to be presented:

- Bring working prototype boards
- A set of schematics, diagrams and drawings listed in Checklist
- Filled out Checklist for printed circuit board review
