

MINOS+ Status Report

Adam Schreckenberger
All Experimenters' Meetings
September 22, 2014

Near Detector

- Near Detector was powered down
 - Powering on ND electronics and DAQ
 - New DAQ rack ORC in progress
 - Few issues need to be addressed
 - Once complete, DAQ can be left on unattended
- New rack filters are being ordered – old ones need to be replaced
- Electronics cleaning procedure is being finalized
 - Have identified several graduate students and techs to be workers in this effort

No other DAQ/Hardware issues to report

Far Detector

- DAQ at FD will be off for several days to replace production servers with newer machines
- Bill Badgett is at Soudan to commission the new timing server

MINOS+ Status in a ROC
