

MINOS+ All Experimenters' Meeting Report

A.P. Schreckenberger
2015-10-26

Near Detector

- ▶ Master fan pack warning this weekend
 - ▶ Remained on – opted to wait to swap it out
 - ▶ Replacing(-ed) pack this morning
- ▶ Two minders swapped out last week to address hot channel issues
- ▶ Art Kreymer updated ND data archiver script
 - ▶ Now using same data archival script for DAQ, DCS and Beam
- ▶ Network settings on ND DCS fp-console-vm checked before beam start
- ▶ daq22-nd turned off last week
 - ▶ Reason unknown, recovered with remote restart

Far Detector

- ▶ Things rather quiet at FD
- ▶ Environmental monitor crashed on the 23rd
 - ▶ Recovered with restart

- ▶ *The detector is still humming along...*

Return of Beam!

- ▶ Thanks to all those who helped get the beam ready during the shutdown
- ▶ MINOS+ is reconstructing data
 - ▶ Plots are unfortunately absent this week
 - ▶ Our DST (higher-order analysis files) production is failing due to the different beam conditions (horizontal incident on target)
 - ▶ Have informed the MINOS+ analysis coordinator such that the right folks can be poked
 - ▶ Good physics data POT fractions and livetimes will have to be recalculated, ignoring that cut
 - ND: 99.7% POT Fraction / 98.7% livetime
 - FD: 99.8% POT Fraction / 99.7% livetime
